Project Summary

The project is a forum-style website with the purpose of communication between like-minded individuals about various topics. The application domain is multi-purpose social media, social interaction, and news collections, where users will interact with each other through post-comment and comment-comment relationships. The more a member uses the application, the greater amount of influence they gain within the application and the more they can influence the popularity of other user content.

Tasks

1. Frontend development
   a. Content view - MAR 16 Steve
